

We have linked some simple patterns to use (on the website), but please use any pattern you are comfortable with making. Time is of the essence; you need not fret about which one at this point. All masks will be of value.

PLEASE BEGIN BY:

- Begin by washing your hands and clearing/cleaning space in your home free of food, smoke, pets, and kids.
- Launder the fabric you intend to use, ideally with unscented detergent.
- Your work environment need not be sterile, but it should be clean.
- Wash your hands frequently and do not touch your face.

We have linked some simple patterns to use (on the website), but please use any pattern you are comfortable with making. Time is of the essence; you need not fret about which one at this point. All masks will be of value.

DO USE:

- The fabric you use should be **new**, unused, breathable and tightly woven, such as 100% cotton, quilting cottons or cotton flannels.
- For ear loops: ties are best for frequent washing, but you can also use elastic, fold over elastic (or cotton twill tape if that's all you have.)

DO NOT USE:

- No vintage, stretchy, knit, used towels/sheets, clothing, metal, plastics, filters, vacuum bags, interfacing or unknown material fabrics.
- For Ear loops: no hair bands, ties, or rubber bands

WHEN FINISHED:

- Place your finished masks in a clean bag and then in a box, along with a paper indicating your full name, phone number, material content, the pattern used, and other info you deem pertinent.
- Seal the box with tape (does not need to be excessively taped up, so that it does not open accidentally during transport)
- Label the outside of the box with the date and also the number of masks inside.
- Once taped shut, do NOT open the box again. It must remain sealed.

If you are trying on prototypes, please do not include them with your finished product.
